GYDE 365 Design

Realise all the benefits of Dynamics 365 - for less

GYDE365-Design offers a fresh approach to the Analysis & Design phases of your Microsoft Dynamics 365 implementation. Supported by Microsoft and developed by a team of industry experts, it provides you with the tools and guidance you need to create a detailed solution design in a more cost-effective, simpler and faster way.

Overview

If you were building a house, wouldn't it be great if you could use the services of a top architect to ensure you get the house you've always dreamt of?

GYDE365-Design is the software application equivalent of having access to that top architect, to help ensure you get the solution you deserve - only without the high cost, and up to two-thirds quicker than traditional methods.

The traditional process for carrying out the analysis and design phases of a Dynamics 365 project takes 5-6 months or more. A huge commitment from your project team. Weeks of lengthy face-to-face, knowledge capture workshops. Endless scoping sessions. And with no guarantees that what you hoped for is what you end up getting.

GYDE365-Design allows you to approach things differently. Much like its sister application, GYDE365-Discover, it is primarily an online, survey-driven application.

Subject matter experts from across your business answer a series of questions. The output from this exercise provides you with everything you need to embark on a high-quality build phase for your desired Dynamics 365 solution design,

Our Approach

1. Customer onboarding sessions
2. Series of role-based surveys
3. Initial review of all survey responses
4. Series of online review workshops
5. Results updated based on workshops
6. GYDE365-Design Output Pack sent

Key Deliverables

- **Comprehensive Solution Design** - detailed functional and technical solution design based on the answers provided from the completed surveys

- **Detailed System Configuration** - partner-ready configuration design document that can be given to your implementation partner to start building your solution

- **Detailed 'To be' Processes** - Breakdown of 'To be' (future) Dynamics 365 processes - to help with System Build, Change Management & Training

- **Reliable Project Estimates** - breakdown of the anticipated project phases, timings, external costs and internal resource requirements. Plus, all your Dynamics 365 license subscription requirements.

Duration & Costings

- **Time:** Faster, by up to 66% faster
- **Cost:** Fixed price; available on request.

Key Benefits

- **Cut Costs** - reduce Design costs by up to 55% and reduce your overall project costs by up to 40%

- **Reduce Time** - shrink the Analysis and Design phase of your project by up to 66%

- **Minimise Risk** - obtain a consistent, clear Solution Design to meet your desired objectives

- **Reduce Complexity** - less expertise and associated costs required for internal resources

- **Increase ownership** - a clear Solution Design puts you in a stronger position when selecting and working with an implementation partner

- **Increase Participation** - encourage input from team members who may feel excluded, or are unable to attend in-person workshops.

About Seer 365

Our mission is to revolutionise the Microsoft Dynamics 365 implementation model, from system evaluation through to deployment, empowering organisations to achieve greater success. Using our team of experts, who have been involved in 1000+ system evaluation and implementation projects, we create transformative applications and services that help standardise, simplify and automate project tasks to reduce cost, minimise risk and save valuable time.
